

ACG-ECMO™

Advanced Clinical Guidance for ECMO

Consolidated ECMO information in the palm of your hand

Connect data, medical devices, and best practices for optimal ECMO patient outcomes

- View real-time and trend data from all medical devices on the ECMO cart
- Collect data from medical devices at the patient bedside
- See latest lab results and other data from the patient medical record
- Configurable guidances and procedural checklists to support multiple team members
- Compatible with any mobile device platform or desktop

 **TERUMO**
CARDIOVASCULAR

Patient-Centered ECMO Care

Monitor your patients anytime, from anywhere

Advanced Clinical Guidance (ACG) ECMO™ lets you monitor multiple patients simultaneously from any mobile device. The cloud-based tool consolidates data from multiple sources onto one display that can be viewed remotely by the entire ECMO team.

Optimizing ECMO patient care

- Evaluate patients for ECMO therapy from an ACG-HUB™ equipped room, even rooms in referring hospitals.
- Configure for best practices — set your team access, alarm limits, display parameters, and procedure reminders.
- Monitor ECMO therapy. Simplify communication for shift changes and consults with experts not in the room.
- Document and analyze with automatic seamless data uploads.
- Consistent with ELSO terminology guidelines.

Implementation

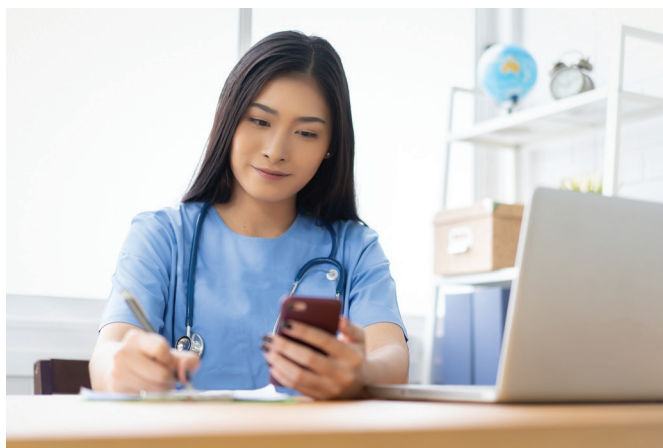

ACG-ECMO is a cloud-based subscription application. An ACG-HUB subscription is required for each ACG equipped room, and an ACG-ECMO subscription is required for each ECMO cart. Hardware, installation and software updates are included in the subscription fee.

Talis Clinical ACG experts will install the application to work with your equipment, EHR and HITs infrastructure.

Contact your Terumo Cardiovascular Representative to receive a customized quote for ACG-ECMO.

Ordering Information

Catalog #	Description	Units/ECMO Cart
Talis Clinical ACG-ECMO		
ACG-ECMO	Talis ACG-ECMO	1
Talis Clinical ACG-HUB		
ACG-HUB	Talis ACG-HUB	1

ACG-ECMO™ helps ECMO teams deliver optimal patient outcomes with secure, mobile monitoring.
